PRE-ANESTHETIC BLOOD WORK:

Your pet is scheduled for anesthesia and dental treatment. Any anesthetic procedure has potential risk. Therefore, we recommend a blood profile for all pets and require it for pets over 7 years of age, to ensure that your pet is in suitable condition prior to this procedure. We are able to perform quick and accurate blood tests before your pet's anesthetic induction. These tests are the same that your doctor would request before you would undergo anesthesia.

YES: I hereby consent to the recommended pre-anesthetic test: **Tier one** **Tier two** **Tier three**

NO: I decline the recommended pre-anesthetic tests. I understand the potential risks by the omission of these tests. I assume full responsibility for my pet should complications arise.

INTRAVENOUS CATHETER AND FLUIDS:

We recommend an IV catheter be placed prior to undergoing anesthesia. IV fluids help your pet by improving blood pressure, assist in processing the anesthetic agents, compensate for blood loss and provide a direct line in case of emergency.

YES, I would like my pet to have an IV catheter and receive intravenous fluids. Cost \$38.00

NO, I do not want my pet to have an IV catheter placed.

HOME AGAIN MICROCHIP:

I would like to have a Home Again microchip placed while my pet is anesthetized. Cost is \$31.00.

YES **NO**

LASER USE:

I would like the Accuvet laser to be used to decrease bleeding, pain and post-operative swelling. Cost is \$49.00.

YES **NO**

Please note: Southgate Animal Clinic is not a 24 hour care facility. Pets hospitalized overnight do not receive monitoring between the hours of 7:30pm and 7:30 am.
